Abstract of DE19935234

The sealing rail (41) has a packing piece fitted into a groove, provided with a sealing body (67), which is held under tension in the longitudinal direction of the groove. The packing piece is divided in the longitudinal direction, with at least one spring element contained in a pocket-shaped recess between its parallel halves, with a separation element between the latter, at least at the edge of the packing piece provided with the sealing body.
